Intel® Ethernet Controller E810

Feature Support Matrix

Ethernet Products Group (EPG)

September 2021

Revision History

Revision	Date	Comments
2.8	September 8, 2021	Updates include the following: • Added PAM4 for QSFP28 Direct Attach Copper cables under "50 GbE Media Supported" in Table 2, "Media Types Supported for the E810". • Updated Linux *ice* driver version in Table 7, "Software/NVM Compatibility for the E810"
2.7	July 26, 2021	Updates include the following: • General updates in support of Software Release 26.4 and NVM 3.00/3.02.
2.6	May 19, 2021	Updates include the following: • General updates in support of Software Release 26.3 and NVM 2.50/2.52.
2.5	March 24, 2021	Updates include the following: • General updates in support of Software Release 26.1 and NVM 2.40/2.42.
2.4	December 21, 2020	Updates include the following: • General updates in support of Software Release 25.6 and NVM 2.30/2.32.
2.3	November 16, 2020	Updates include the following: • General updates in support of Software Release 25.5 and NVM 2.20/2.22.
2.2	September 30, 2020	Updates include the following: • General updates in support of Software Release 25.4 and NVM 2.15/2.14.
2.1	September 17, 2020	Updates include the following: • General updates in support of Software Release 25.3 and NVM 2.10/2.12.
2.0[1]	July 23, 2020	Initial public release.

1. There are no previous publicly-available versions of this document.

Features Supported

Table 1 through Table 3 list the feature support provided by the NVM and software drivers for a given release starting with the production release (Release 25.2, NVM 2.00/2.02). The *Intel® Ethernet Controller E810 Datasheet* reflects the silicon device capability, while this document reflects what is actually supported in the NVM and software for a given release.

- Throughout this document:
  - The Intel® Ethernet Controller E810 is represented as "E810".
  - "X"   = Supported with Intel NVM and software driver.
  - "---"   = Not supported with Intel NVM and software driver.
  - "SNV" = Supported but Not Validated
- The following table lists software releases and associated NVMs:

Software Release Version	NVM Version	Silicon Stepping	SRev
Targeted[1]	1.02	B0	1
25.2	2.00	C0	2
	2.02	B0	
25.3	2.10	C0	2
	2.12	B0	
25.4	2.15	C0	2
	2.14	B0	
25.5	2.20	C0	2
	2.22	B0	
25.6	2.30	C0	3
	2.32	B0	
26.1	2.40	C0	3
	2.42	B0	
26.3	2.50	C0	4
	2.52	B0	
26.4	3.00	C0	5
	3.02	B0	

1. This was a targeted production release.

- Features not listed in this document are not officially supported.

1. This was a targeted production release.
2. Limited support on selected boards.
3. Link to *Intel® Ethernet Controller E810 Application Device Queues (ADQ) Configuration Guide*.
4. SPDK only. Link to *NVM Express over TCP with SPDK for Intel® Ethernet Products with ADQ Configuration Guide*.
5. Should not be used in 8x10 GbE mode. Supported in configurations of 4 PFs or less.
6. RDMA driver certification and vSAN certification will be post-release.
7. Limited support. DCB and Priority Flow Control (PFC) are currently not supported.
8. Link to *Intel® Ethernet Controller E810 Dynamic Device Personalization (DDP) Technology Guide*:

9. Kernel versions 5.10 and later are needed for full support.
10. Support on PCIe interface only.
11. Supports read-only operation.

Notes:
  a.   64 bit only.
  b.   Driver available at VMware website.

1. This was a targeted production release.
2. The out-of-tree Linux driver(s) are only officially supported on the Kernels listed above. The driver(s) might compile successfully on an older kernel back to 3.10, but such configurations are not officially supported.
3. Refer to kernel documentation for detailed information on features supported.
4. RDMA and ADQ are not supported. Please refer to Release 26.4 Release Notes for details on current limitations.
5. The FreeBSD *ice* driver for the E810 utilizes the *iflib* API.

b. 64 bit only. Apply the *librdma-27.0* patch included in the release to *rdma-core-27.0*.										

1. The out-of-tree Linux driver(s) are only officially supported on the Kernels and distros listed above. The driver(s) might compile successfully on an older kernel back to 3.10, but such configurations are not officially supported.
2. This was a targeted production release.
3. Limited Support. DCB and PFC are not currently supported.
4. RDMA driver certification and vSAN certification will be post-release.

NVM and Software Compatibility

With Intel® Ethernet Network Adapters, both the firmware (device NVM image) and network drivers are field-serviceable, and the NVM image and network driver are updated as a matched set. Updating the device image and driver together can increase key features including performance, manageability, media types, physical port counts, virtualization, offloads, remote boot options, VLAN support, teaming, and Receive Side Scaling.

Table 7 lists the sets of NVM images and Intel Ethernet Controllers software releases that go together, including the DDP package. Intel recommends that you update the NVM and Software Driver to compatible versions.

Note: Update to the device driver for given release prior to running the NVM Update tool.

1. This was a targeted production release.
2. For devices that are AVF compliant as described here (https://www.intel.com/content/www/us/en/products/docs/network-io/ethernet/controllers/ethernet-adaptive-virtual-function-hardware-spec.html), AVF base mode features are supported across NVM/PF combinations. Advanced features for VF drivers might require an update to NVM and PF/AVF drivers.
3. Drivers posted in VCG (VMware Compatibility Guide) might differ in version from drivers listed in this document at publication.
4. ESXi drivers have not been updated. No new driver versions are available for Release 25.6.
5. ESXi drivers have not been updated. No new driver versions are available for Release 26.3.
6. The driver has not been certified and should only be used for validation purposes.
7. RDMA driver certification and vSAN certification will be post-release.
8. Limited Support. DCB and PFC are not currently supported.

Additionally, the NVM update package that comes with the Intel® Ethernet Controllers Software Release allows updates from older NVM versions. Table 8 indicates the version of NVM from which the tool allows updates.

1. NVM transition must be done with the Tools and Base Driver from the latest release. Refer to Table 7 for supported NVM, Tools, and Base Driver versions.
2. Each step of a NVM transition requires a reboot (PCIe reset).
3. Downgrade from NVM 2.02 to NVM 1.02 is available only on selected devices.
4. Downgrade from NVM 2.12 to NVM 1.02 is available only on selected devices.
5. Downgrade from NVM 2.14 to NVM 1.02 is available only on selected devices.
6. Downgrade from NVM 2.22 to NVM 1.02 is available only on selected devices.
7. Downgrade from NVM 2.32 to NVM 1.02 is available only on selected devices.
8. Downgrade from NVM 2.42 to NVM 1.02 is available only on selected devices.
9. Downgrade from NVM 2.52 to NVM 1.02 is available only on selected devices.
10. Downgrade from NVM 3.02 to NVM 1.02 is available only on selected devices.
11. Updating to same image again is allowed.

Note: The MinSRev on your device determines if you can downgrade to an older SRev. For details on how this works, see the *Minimum Security Revision Control for Intel® Ethernet Products Application Note* (Doc ID: 635205).

DPDK Compatibility

1. Compatibility testing (basic use case testing including VF).

Validation - Configuration Maximums

E810 product validation has been limited to the following configuration maximum values. Configurations that operate the device beyond these limits is not supported.

Enterprise Use Cases:

- 1 port: 16 VMs, 16 VF, 1 VF per VM
- 2 ports: 16 VMs total on host, 8 VMs per port, 1 VF per VM

Comms Use Cases:

Use case assumes up to 64 VMs per port, each VM has 2 VFs, bi-directional traffic on these 2 VFs

- 1 port: 64 VMs, 128 VFs, 2 VFs per VM
- 2 ports: 64 VMs total on host, 32 VMs per port, 2 VFs per VM
- 4 ports: 64 VMs total on host, 16 VMs per port, 2 VFs per VM
- 8 ports: 64 VMs total on host, 8 VMs per port, 2 VFs per VM

Cloud Service Provider (CSP) with containers Use Cases:

- Use case assumes up to 256 VFs with SR-IOV, assign them to containers, 1 VF per container
