Dear Valued Supplier:

L3 Harris is a global aerospace and defense technology innovator and provide advanced technologies across multiple domains. As a global company we are aware of, understand and monitor our ever changing internal and external business environments. Business requirements include international, national and local regulations, and customer requirements.

As you know, governments globally require documented proof of product environmental compliance including, but not limited to, restriction of the use of certain hazardous substances in electrical and electronic equipment; RoHS Directive 2015/863/EU and REACH SVHCs.

To ensure with these environmental product regulations, we must identify the presence of any restricted substances in the components we purchase, as well as some substances that may be restricted in the future.

L3 Harris has engaged IHS Markit, a worldwide leader in technical content services to assist us in collecting environmental compliance information. This data is being gathered for components and materials which we purchase from our valued suppliers and authorized distributors.

Thank you for your cooperation in providing the requested information as quickly and completely as possible. The content data for products is essential for us to determine the continued use of your product or your recommended replacement product.

Please provide the requested information to IHS Markit within 2 weeks of receipt of this request. We request that you provide Full Material Disclosures (FMDs). This prevents the need for repeated supply chain queries to update material declarations, as restricted or declarable substance lists change.

Should you have general questions about this project, please contact Jeff Golden at jeff.golden@l3harris.com.

Please direct all clarifications and/or technical questions regarding this request to the IHS Markit contact indicated in the accompanying email.

We greatly appreciate your cooperation.
