Unable to inject the driver into Windows Recovery partition

This issue does not impact Intel® Optane™ memory functionality. You can continue the installation, but you should inject the installed driver into your Windows recovery environment once the installation process is completed. Not doing so may prevent the Windows System Recovery environment from detecting your Intel® Optane™ memory volume in the event of critical system failure.

For further support please visit [here](#)

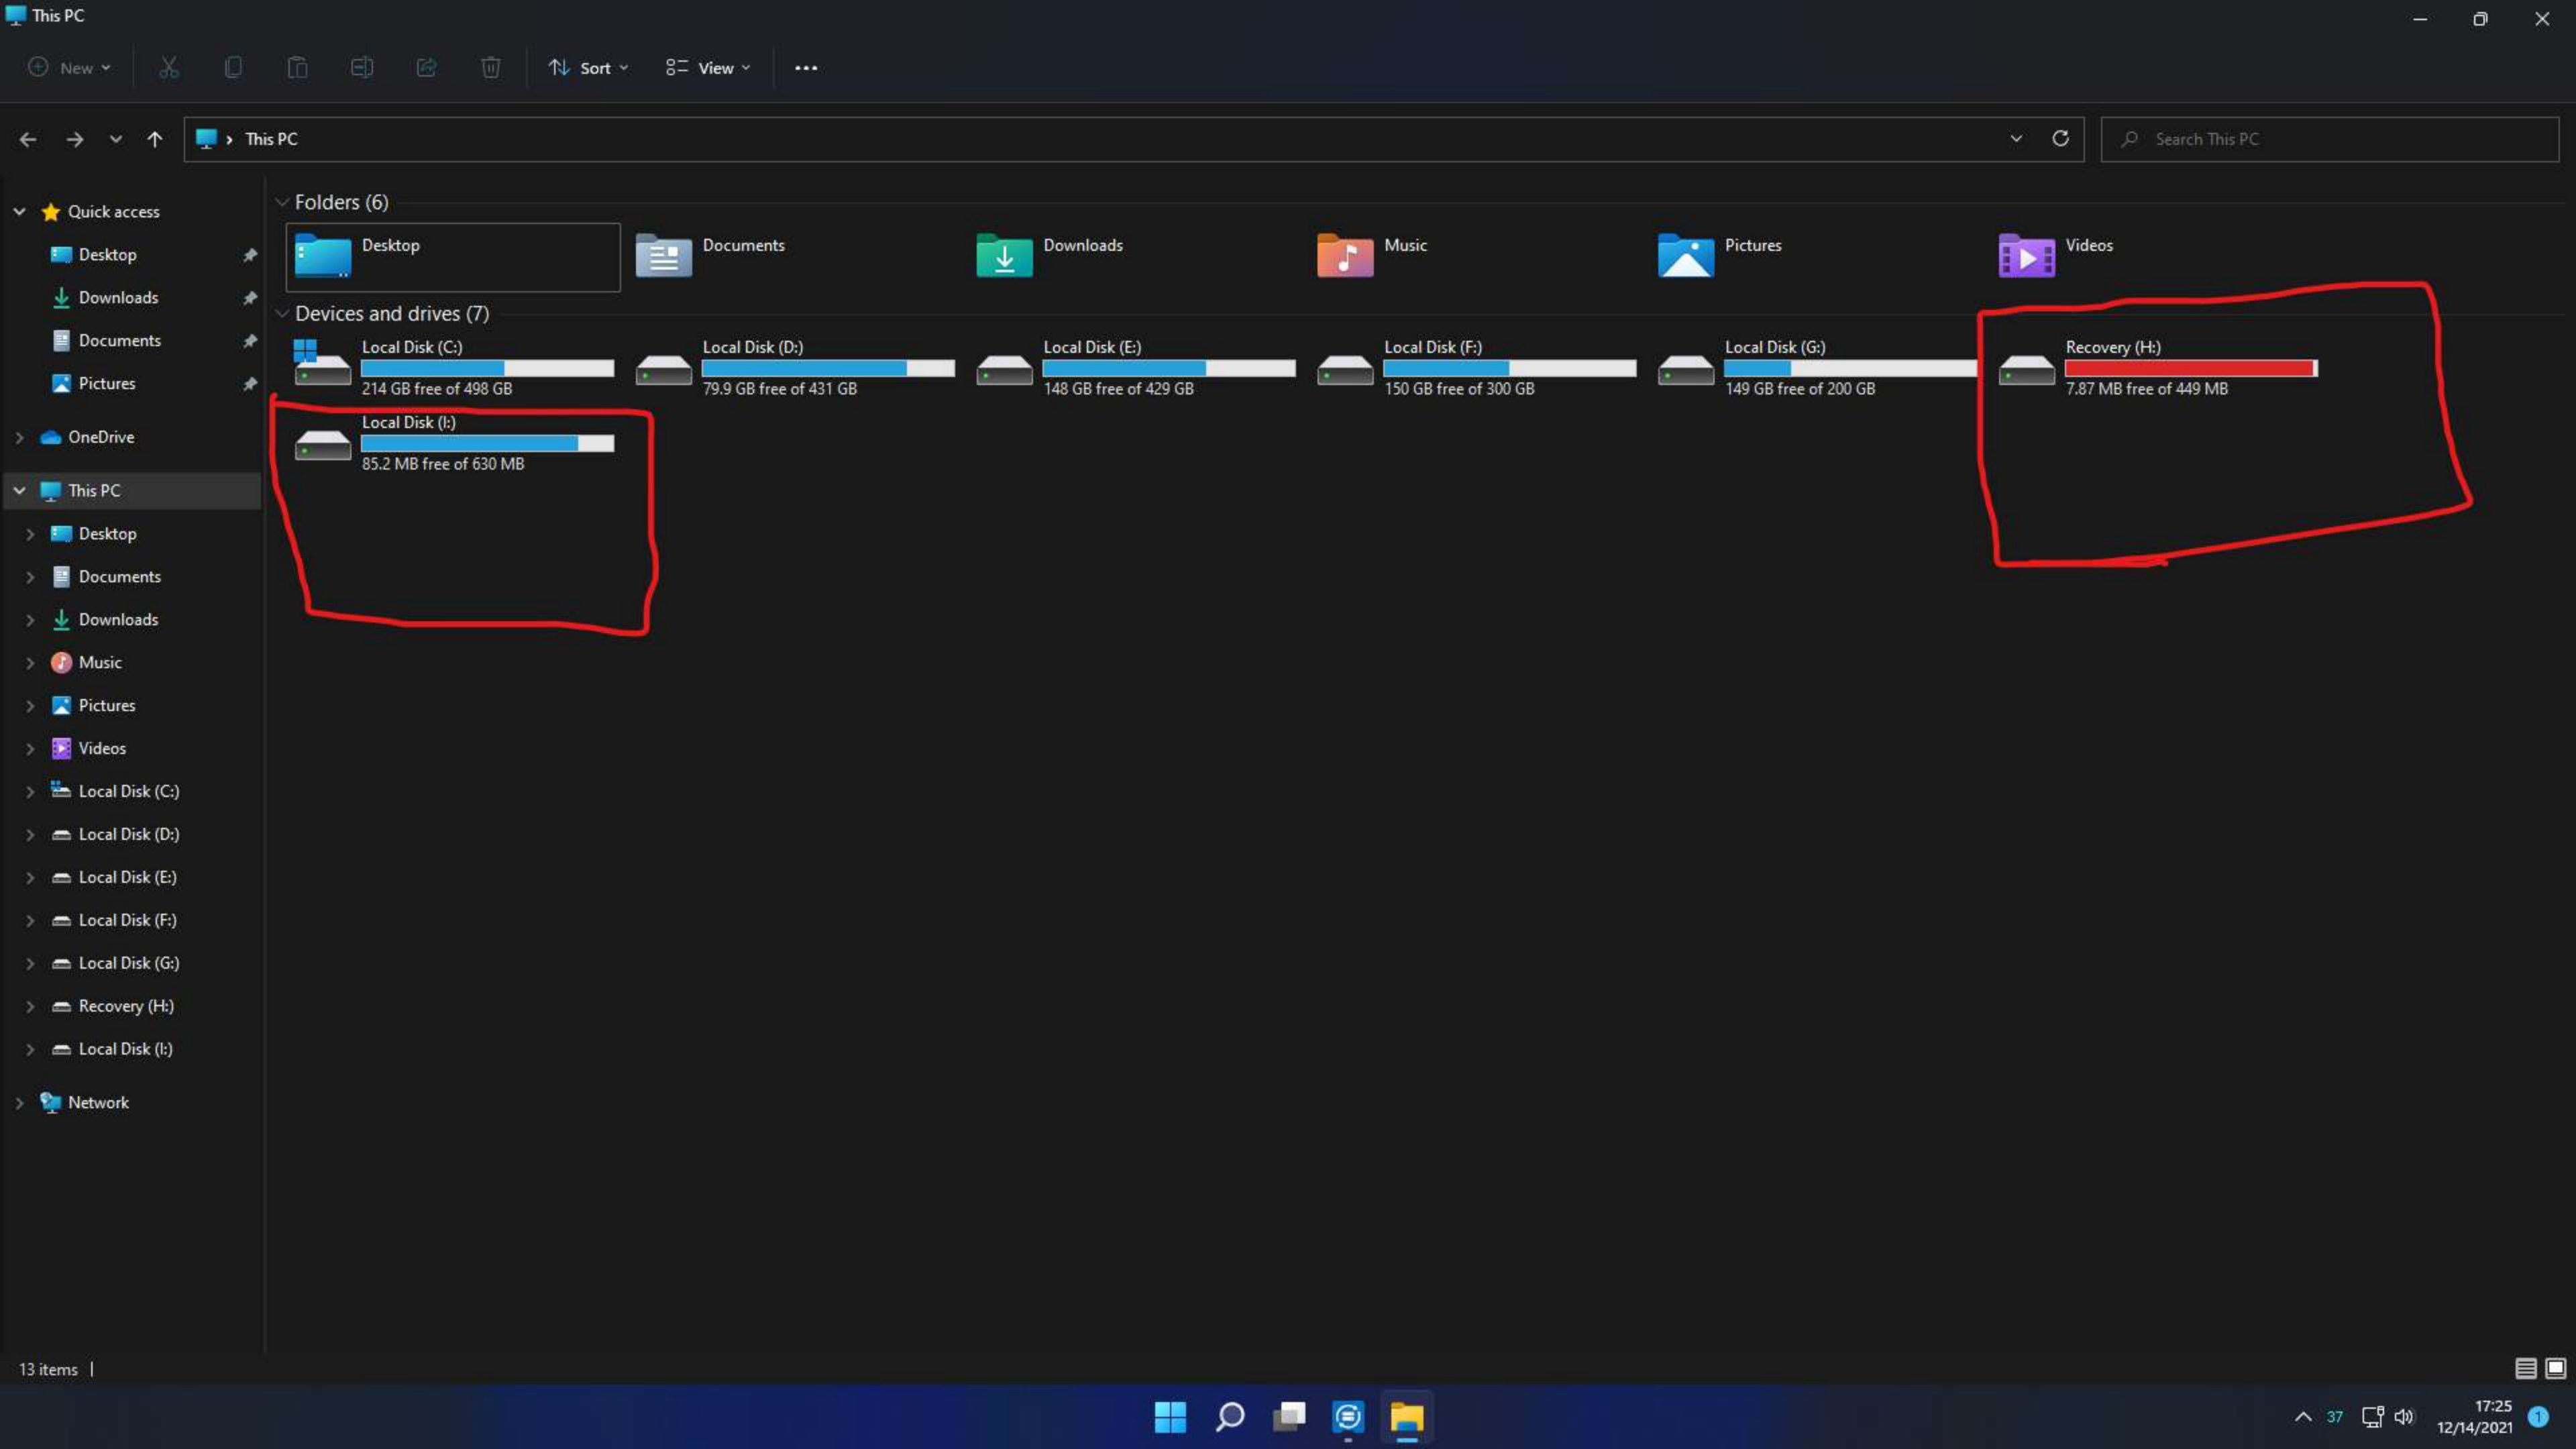

Click 'Next' to continue the installation process.
